# **ULTRA-CAVITATION CLEANING**

*THE SAFEST UNDERWATER CLEANING SYSTEM*

 **CAVIBLASTER™**

# !!! OUR MOST POPULAR !!!

## CaviBlaster 1325-GSS

(13 gpm / 2500 psi)

CaviDyne's new design with Stainless Steel, It is a compact and lightweight cleaning system, yet produces superior performance by using ultra-cavitation. The predecessor to this Model, operating at a mere 2200 psi, is documented to out-clean a 6,500 psi water blaster system.

**Our Top Selling Unit, specifically designed for portability. Take it anywhere!**

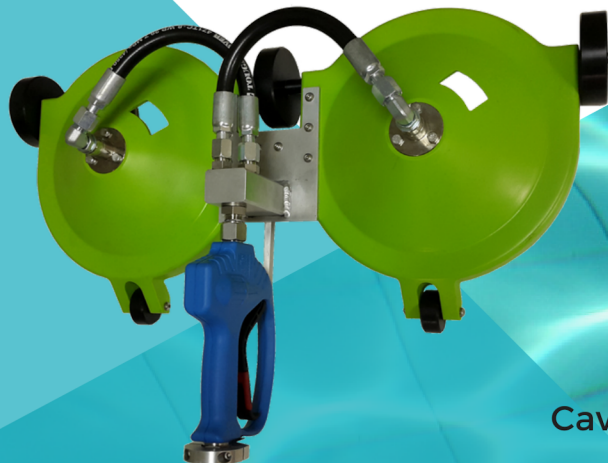

## CaviBlaster 2828-D

(28 gpm / 2800 psi)

Our Industrial workhorse which generates a stream of high velocity cavitation bubbles for highly efficient cleaning. It can strip fouling, corrosion and coatings to bare metal if desired, this unit has an electric version available. A dual diver gun option is also available.

**With this unit, you can use Two ZT-Guns or Two CaviDomes at the same time or one DoubleDome for wider requirements. Very useful in cleaning and detailing boats and vessels.**

**DoubleDome**

**CaviDome**

**Zero-Thrust Gun**

# INDUSTRIAL PURPOSE

## CaviBlaster 2570-D

(30 gpm / 7200 psi)

The ultimate industrial workhorse for serious cleaning or concrete blasting, it effectively strips all types of marine fouling corrosion and coatings to bare metal. The unit is also effective for underwater construction and demolition projects, piling re-facing, re-jacketing and reconstruction, as the unit effectively breaks down concrete.

**Also known as the ConcreteBlaster, great for SA 2.5 Inspections**

## CaviBlaster 3040-D

(30 gpm / 4000 psi)

An Industrial marvel which generates a super stream of high velocity cavitation bubbles for highly efficient cleaning which can strip fouling, corrosion and coatings to bare metal if desired. This unit is off-shore rated. An electric version is available.

**Ideal for Off-Shore Applications, perfect for SA 2.5 Inspections**

## CaviBlaster 4030-D

(40 gpm / 3000 psi)

This is an Industrial unit which generates a high volume stream of high velocity super-cavitation bubbles for highly efficient cleaning. Can strip fouling, corrosion and coatings to bare metal if desired. This unit is off-shore rated. An electric version is available.

**This unit is designed for cleaning with up to 3 Divers with ZT-Guns or 1 DoubleDome, great for cleaning FPSOs, LNGs, Tankers and Cruiser Liners, very big vessels by divers or with ROVs. Also preparing for SA 2.5 Inspections.**

# WHAT IS ULTRA-CAVITATION ?

CaviDyne™ LLC employs a revolutionary technology known as Ultra-Cavitation for underwater cleaning using much lower pressures than conventional equipment. These systems are significantly more effective, efficient and ergonomic than traditional pressure-washers, water-blasters or grit blasters. Further they eliminate the dangers associated with the use of high pressure underwater cleaning equipment.

CaviBlaster™ systems remove marine growth in significantly less time and with better results than traditional methods, while costing less to operate. The compact CaviBlaster™ units clean steel, concrete, wood, rubber, fiberglass or fabric, without damaging existing surfaces or surface coatings. The more powerful CaviBlaster™ models will quickly clean surfaces to bare metal, stripping away heavy fouling and oxidation. Our biggest CaviBlaster™ is known as the ConcreteBlaster™. It is powerful enough to crush concrete.
